Skin cancer is the most common form of cancer in the United States. The two most common types of skin cancer—basal cell and squamous cell carcinomas—are highly curable. However, melanoma, the third most common skin cancer, is more dangerous, especially among young people. About 65%–90% of melanomas are caused by exposure to ultraviolet (UV) light. For more information, visit the [National Cancer Institute's website](#).

Enjoy the sun safely!

- Use sunscreen with sun protective factor (SPF) 15 or higher, and both [UVA and UVB](#) protection.
- Wear clothing to protect exposed skin.
- Wear a hat with a wide brim to shade the face, head, ears, and neck.
- Wear sunglasses that wrap around and block as close to 100% of both UVA and UVB rays as possible.
- Seek shade, especially during midday hours.
