## Health Alerts

### Health Alert #13 - Traveler's Health - 03/27/2002

Erie County Health Department Bureau of Disease Control has recently investigated a case of vaccine-preventable disease acquired during travel to an infected area. This disease may have been avoided if the patient had received the proper immunizations prior to travel. It is strongly recommended for health care providers to insure that their patients receive the appropriate prophylaxis before traveling to high-risk areas.

For more information regarding Travelers' Health, please visit the following CDC link:  
<http://www.cdc.gov/travel/>
